Program Description

Northwest Technology Center's Web Development and Graphic Design program prepares students for success in emerging web and graphic design environments. Students receive training to work for a web design firm, an individual company, or just make extra money by bidding on projects that clients have posted through online marketplaces. Students will learn to create, design, and produce web sites and graphic design products. A variety software packages are used to create both print materials and interactive web sites.

The Web Development and Graphic Design course is unlike a traditional classroom setting because announcements and assignments are available through a course website. Students either post their work on their own class website or submit their work electronically to their instructor. The course will prepare students to enter a variety of Internet and web site development jobs. Individualized and group instruction, combined with hands-on training, will provide students with the basic programming skills necessary to begin a career in the exciting and rapidly growing fields of web development and graphic arts.

Students also prepare a portfolio to market skills and receive training in employability.
